## Introduction

Security Bank Corporation is one of the Philippines' leading universal banks serving retail, commercial, corporate and institutional clients. Security Bank's major businesses include retail, commercial and corporate banking, and financial markets. It offers a wide range of services including financing, leasing, foreign exchange, stock brokerage, investment banking and asset management through its subsidiaries.

Our project is about knowing the procedure of the company and their process on why they became a successful company., By making an entity relationship diagram and making a database based on their procedure or process.

We are making these because we want to know and experience on how they made the procedure of the company and how they came up with this idea.

## Objectives of the study

General:

To increased participation in investment strategies, securing clients through saving and loan schemes, development of private sectors and cutting costs for financial services.

It is to offer diverse services ranging from insurance to mutual funds, from stock broking to residential finance, from merchant banking to portfolio management under a single summit brand, they gradually metamorphosed from being company organizations that focused primarily on cash transactions to a company linked to financial transaction data. Thus, with this transition.

Specific:

- To secure the financial interest of companies that have received direct investment
- To diversify their range of services and have larger influence on the financial markets
- To develop private sector and ensure its stable run and economic growth.

- To reduce the costs of their financial services by enlargement, providing low interest loans to economies.

## Scope and Limitation of the study

This study will primarily focus on developing a database system which is for the IT Operations of Security Bank Luzon franchise in the Philippines. Handling all production database will be the main priority of this proposed database system for it is a major aspect in banking.

This system will let employees' monitor and maintain data of every customer which will reduce the amount of lost data in the future.

The proposed database system will be on its maximum performance depending on the needs of the company, but it will be an addition to the expansion of the company. Hence, the system will be updated immediately before handling it out to the company

## Business Rule (Two Way):

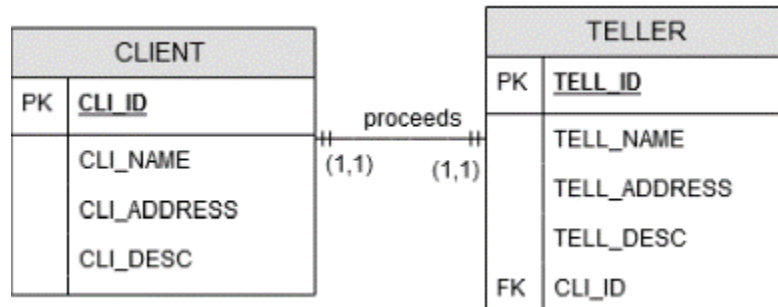

1. A CLIENT proceeds to the BANK; the BANK is proceeded by the CLIENT.

2. A CLIENT fills up the SLIP; the SLIP is filled up by a CLIENT.

3. The CLIENT proceeds to the TELLER; the TELLER is proceeded by a CLIENT.

4. A CLIENT transacts by PAYMENT; the PAYMENT is transacted by a CLIENT.

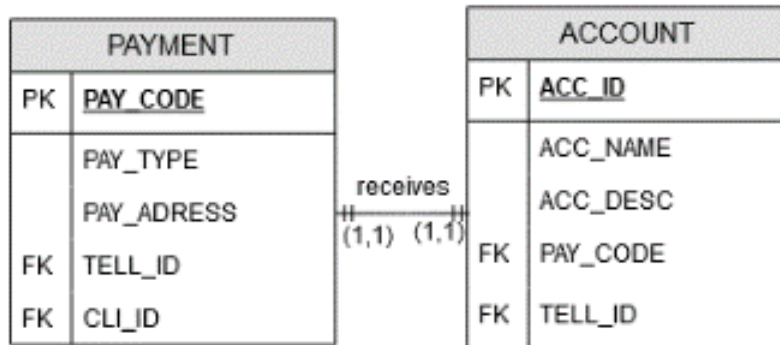

5. The TELLER receives PAYMENT; the PAYMENT is received by the TELLER.

6. The TELLER makes DEPOSIT; the DEPOSIT is made by the TELLER.

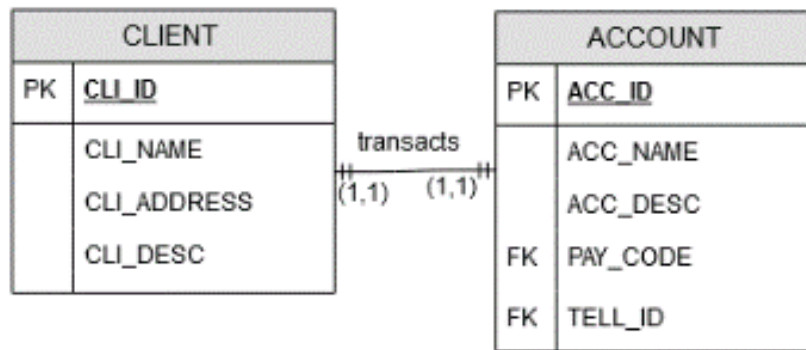

7. The ACCOUNT receives PAYMENT; the PAYMENT is received by the ACCOUNT.

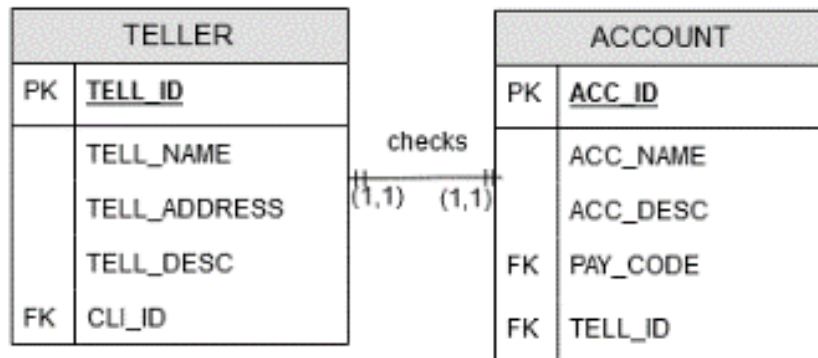

8. A CLIENT writes on the SLIP; the SLIP is written by a CLIENT.

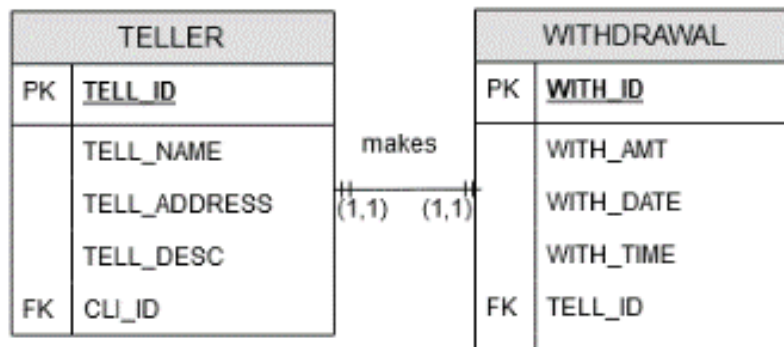

9. A CLIENT transacts using ACCOUNT; the ACCOUNT is being transacted by A CLIENT.

10. The TELLER checks the ACCOUNT; the ACCOUNT is checked by the TELLER.

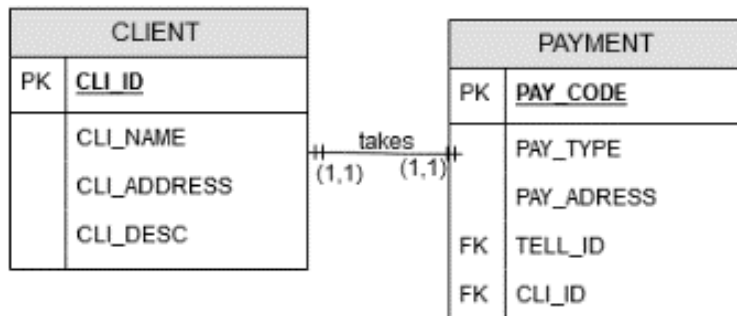

11. The TELLER makes WITHDRAWAL; the WITHDRAWAL is made by the TELLER.

12. The TELLER gives PAYMENT; the PAYMENT was given by the TELLER.

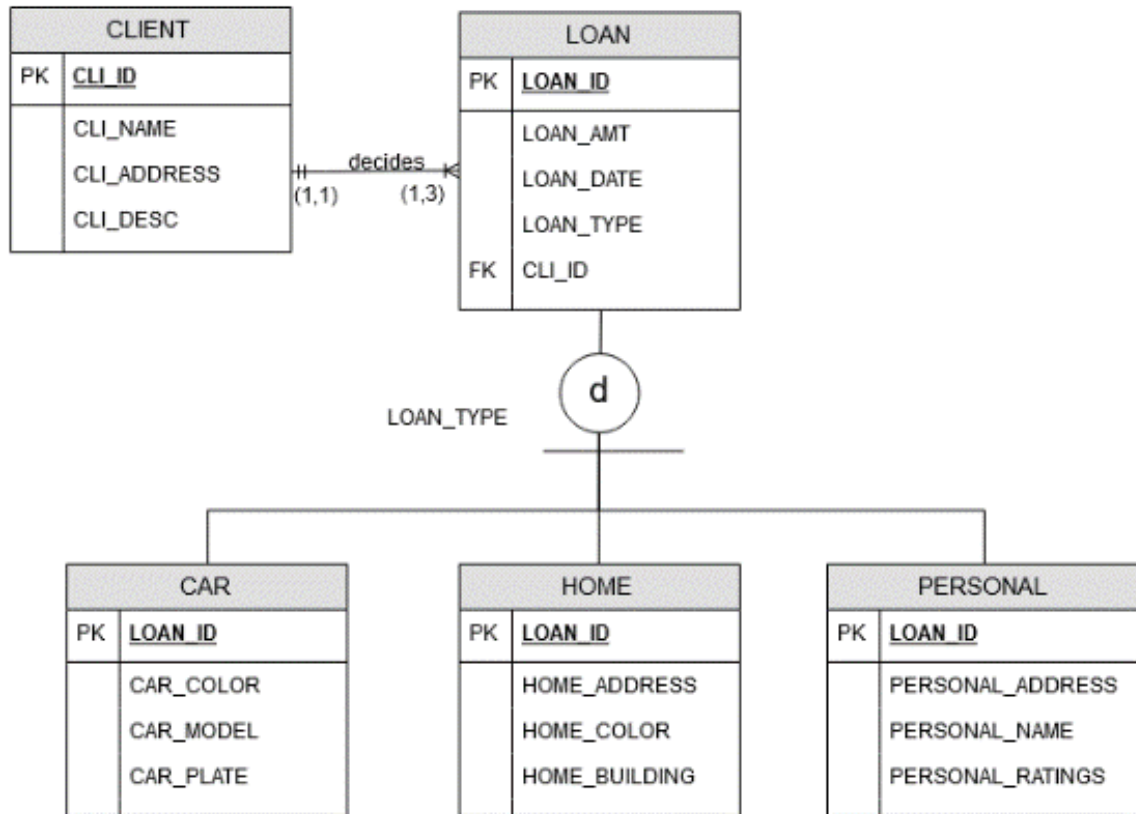

13. A CLIENT takes the PAYMENT; the PAYMENT was taken by A CLIENT.

14. A CLIENT decides to LOAN; the LOAN is decided by a CLIENT.

15. The TELLER check eligibility of the ACCOUNT; the ACCOUNT is checked by the TELLER.

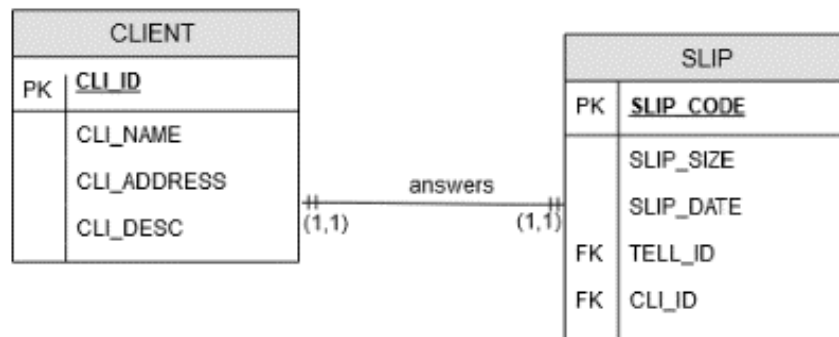

16. The TELLER gives the SLIP; the SLIP was given by the TELLER.

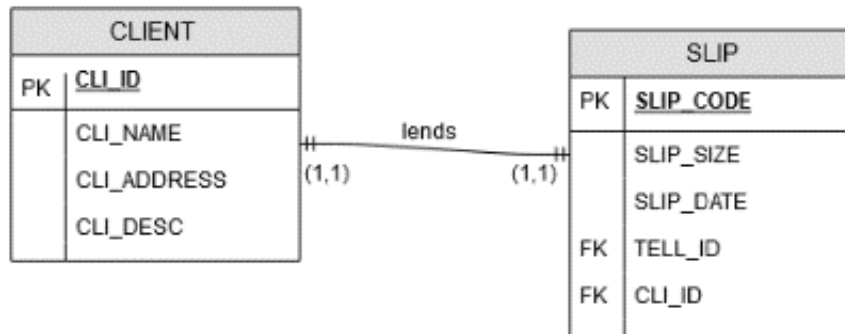

17. A CLIENT takes the SLIP; the SLIP is taken by a CLIENT.

18. A CLIENT answers the SLIP; the SLIP is answered by a CLIENT.

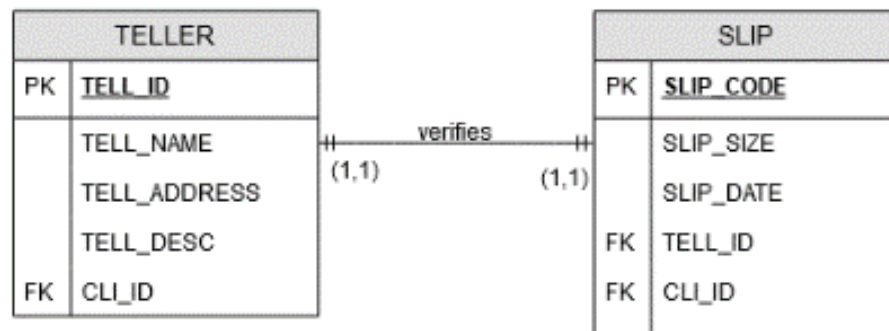

19. A CLIENT lends the SLIP; the SLIP was lent by a CLIENT.

20. The TELLER takes the SLIP; the SLIP is taken by the TELLER.

21. The TELLER verifies the SLIP; the SLIP is verified by the TELLER.

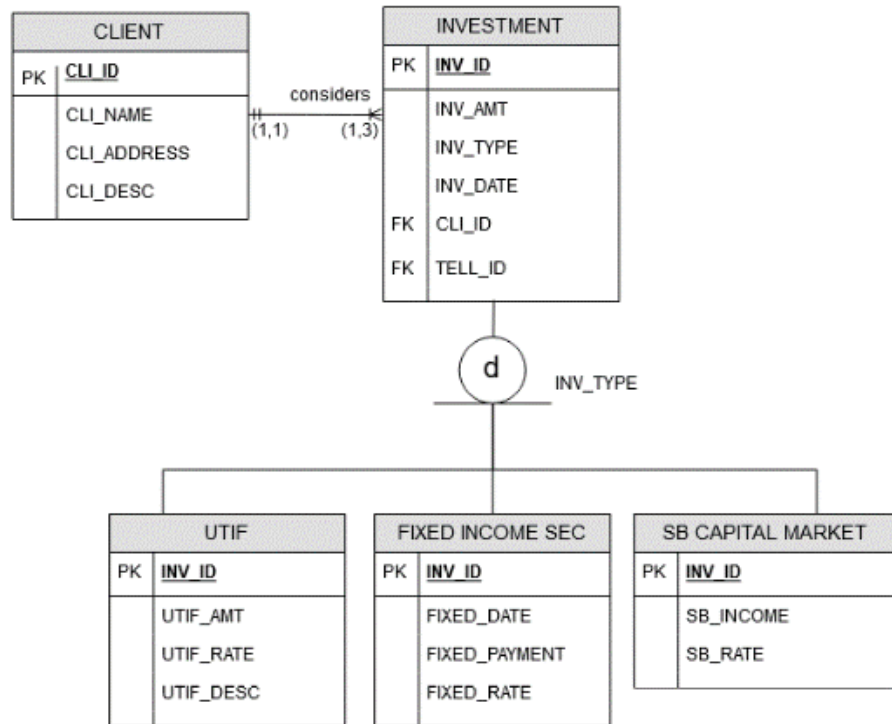

22. The TELLER gives PAYMENT; the PAYMENT is given by the TELLER.

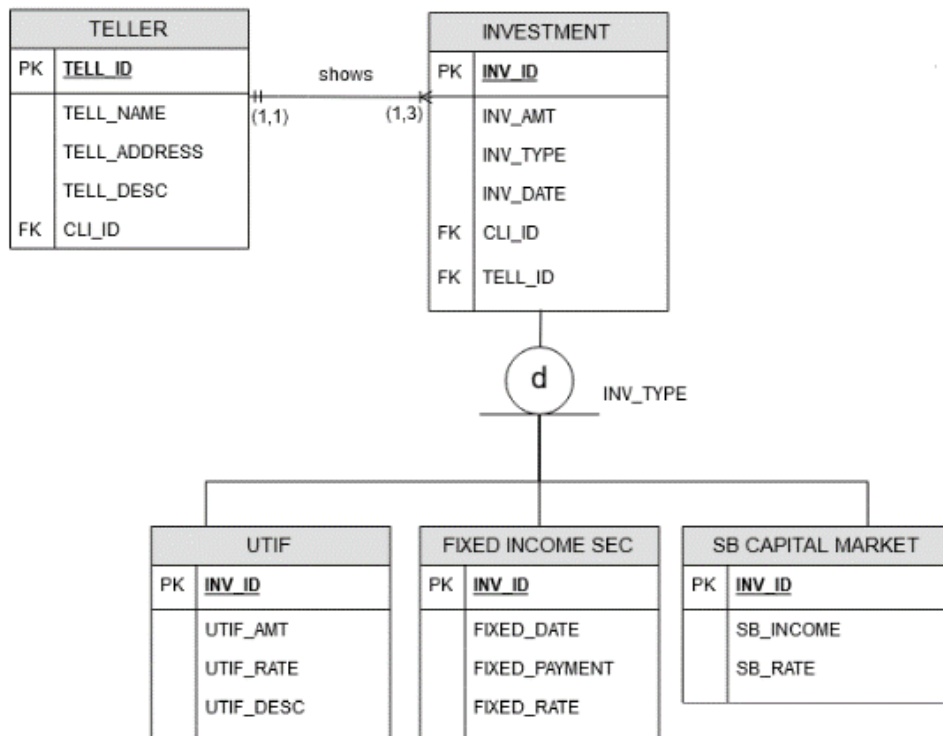

23. A CLIENT receives the PAYMENT; the PAYMENT is received by a CLIENT.

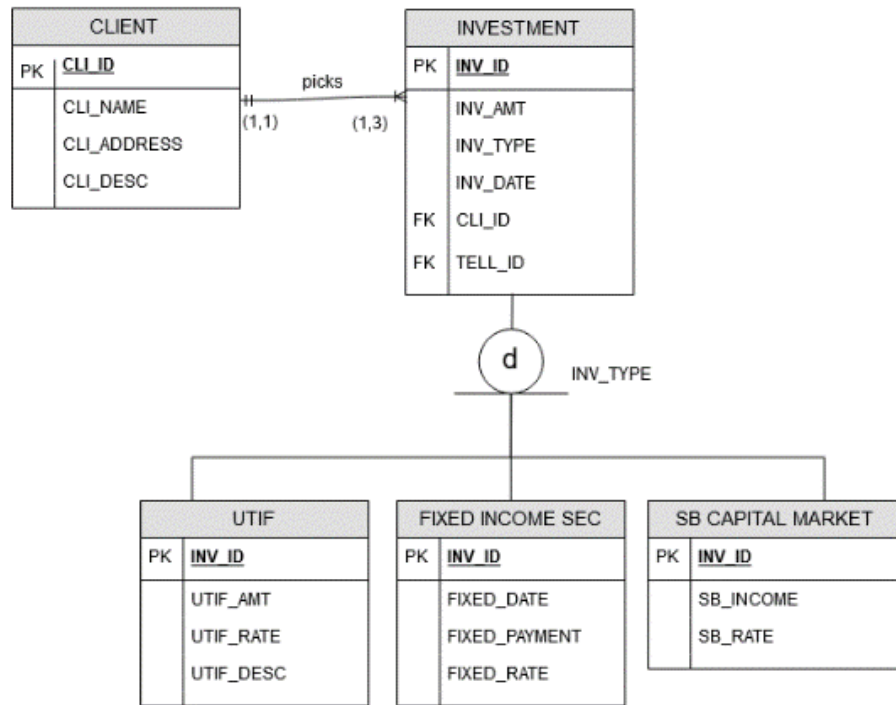

24. A CLIENT considers to do INVESTMENT; the INVESTMENT is considered by a CLIENT

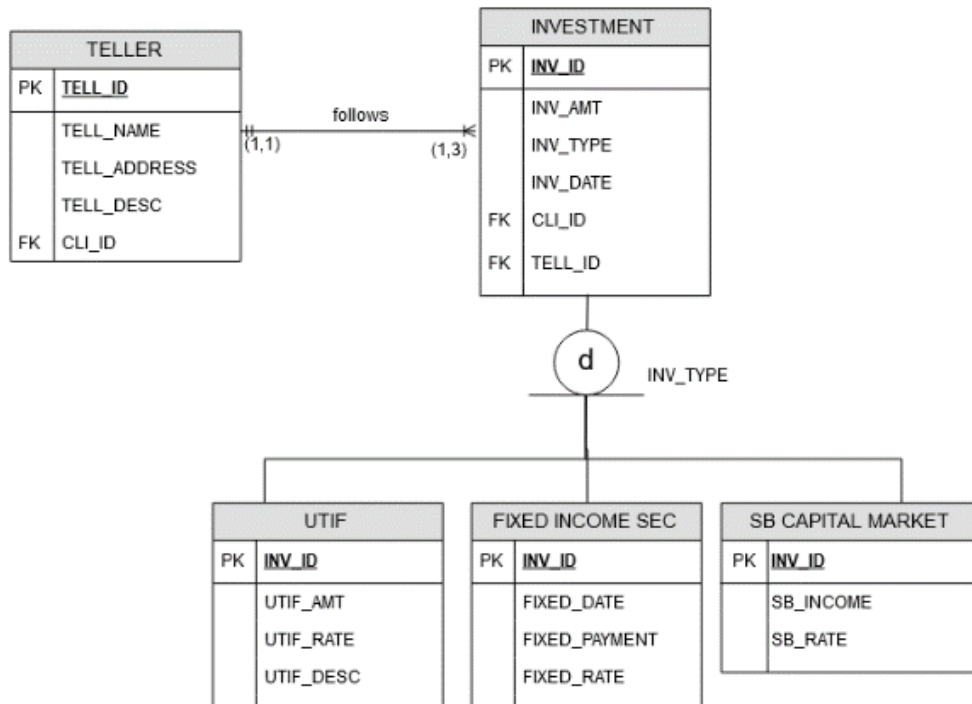

25. The TELLER shows the INVESTMENT; the INVESTMENT is shown by the TELLER.

26. A CLIENT picks an INVESTMENT; the INVESTMENT is picked by the CLIENT.

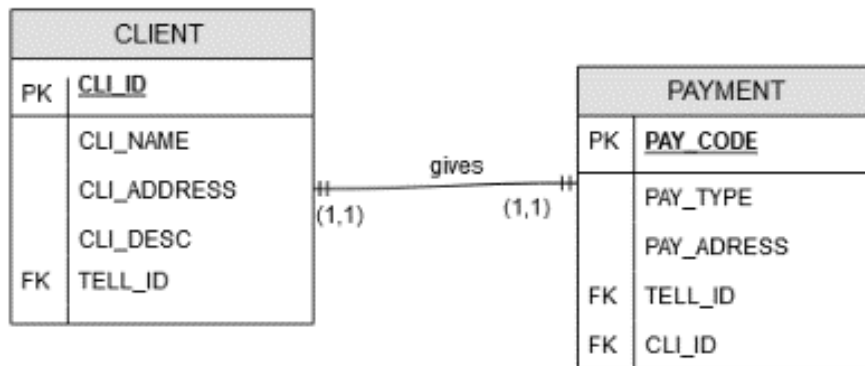

27. The TELLER follows the INVESTMENT; the INVESTMENT is followed by the TELLER.

28. The TELLER talks to the CLIENT; the CLIENT is talked by the TELLER.

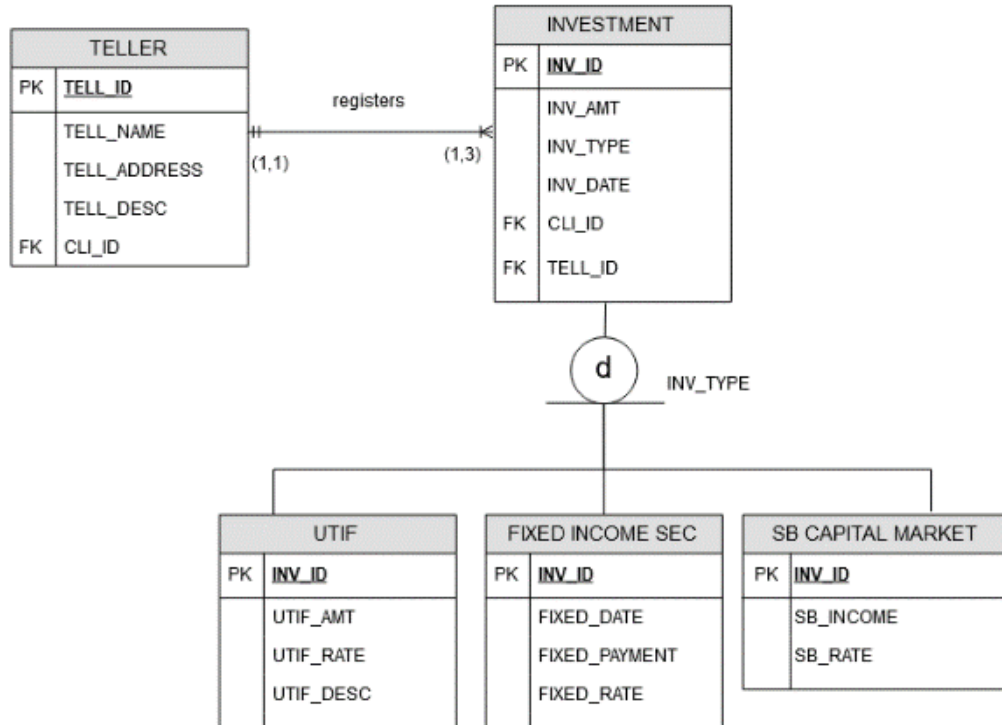

29. The CLIENT gives PAYMENT; the PAYMENT is given by a CLIENT.

30. The TELLER collects PAYMENT; the PAYMENT is collected by the TELLER.

31. The TELLER registers the INVESTMENT; the INVESTMENT is registered by the TELLER.

32. The TELLER prompts the CLIENT; the CLIENT is prompted by the TELLER.

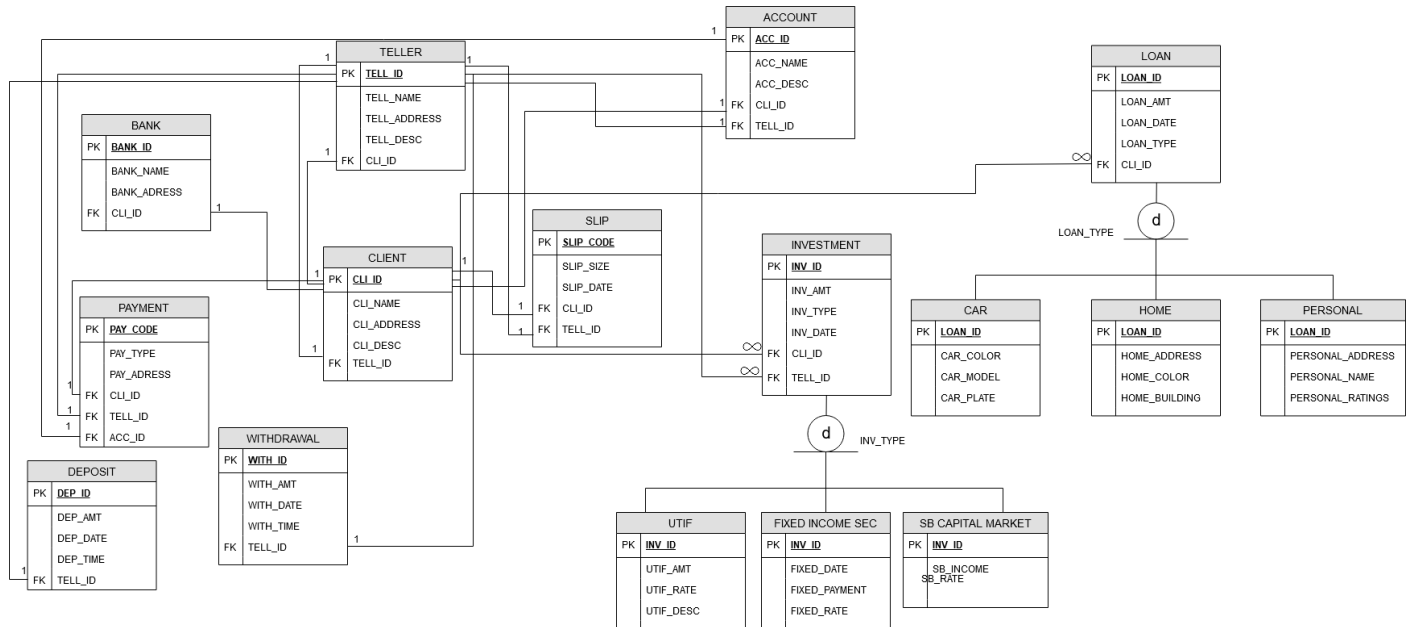

33. A CLIENT leaves the BANK; the BANK was left by a CLIENT

## Screen Design for the System Prototype

Security Bank mobile app interface

## Online Payment

The screenshot shows a mobile application interface for online payments. At the top, there is a blue header bar with a menu icon, the text "Online Payment", and a "Logout" button with a lock icon. Below the header, the form is divided into several sections. The "FROM" section has a "Please select" prompt with a yellow checkmark. The "TO" section includes a "From favorites" link and a list of payment details: "Biller" (SSS Contributions), "Product" (SSS Contributions), "Account" (V0123456789101 with a handwritten "PRN#" in yellow), and "Amount" (1760). Each item in the list has a yellow checkmark. Below this is the "SCHEDULING" section, which contains a toggle switch for "Enable scheduling" currently set to "Off". A note below the toggle states: "By default, your transaction will be completed immediately. Enable scheduling if you want to process it at a later date." At the bottom of the form is a large green button labeled "Confirm payment", which is circled in yellow.
